

NISSAN ESCL emulator

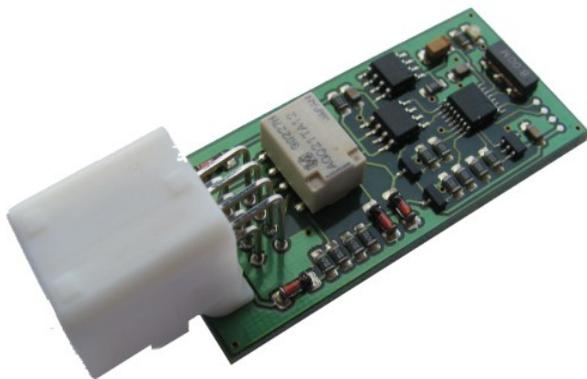

Description :

Device emulates Nissan ESCL unit, compatible with all known native Nissan ESCL units with 8-pin connector. Model years covered: 2005 and up (Murano, Juke etc.). Plug & Play.

Note that some later Nissan vehicles use Renault ESCL, must use Renault ESCL emulator instead.

Installation on car:

Solder original connector onto board and attach wiring loom. That's all to do. Note that original SCL is powered ON only when there is a request for status or command for open or close.

LED on emulator board:

- Two blinks – ESCL is unlocking / unlocked state;
- One blink – ESCL is locking / locked state.
